Traffic Advisory for South Hills

Eugene Police are responding to multiple non-injury collisions in the South Hills area, particularly the neighborhoods near 40th Avenue and Donald. Road conditions are very slick and police are urging drivers in those areas to stay off the roads when possible.

Those that must drive should plan to take extra time and use extreme caution as even though temperatures are currently hovering above freezing, slushy and wet roads present similar traction issues. Give yourself plenty of space between the vehicles in front of you and don't rely solely on 4-wheel drive to provide traction similar to dry pavement.

Adverse Weather Driving Tips: <http://bit.ly/T57Jck>

More cold weather driving tips

- If it is icy out and you don't have to travel, stay home
- Slow down
- Leave plenty of driving distance, don't accelerate quickly and don't brake abruptly
- Drive defensively and cautiously – your eyes should be looking ahead and down the road so you can see conditions and traffic and will be able to react appropriately and calmly
- Even if you have a green light, check to see you are safe proceeding through the intersection. There may be vehicles sliding into the intersection, without the ability to stop due to road conditions and unsafe driving
- If you have an outside temperature gauge in your car, check it from time to time (These gauges are inexpensive and available at stores locally)
- Drive as though you can't rely on your brakes
- Be aware that road conditions can change quickly as the temperature drops
- The surface on overpasses and bridges freeze faster so be cautious
- Remove all ice on windshields, windows, headlights and tail lights prior to driving to ensure adequate visibility, and make sure the vehicle's windshield is defrosted
- Carry chains or traction devices if it is going to snow
- Check your tire pressure. It should be at least at the level recommended by the manufacturer. As the temperature drops, so does tire pressure
- Turn headlights on
- If you crash, carefully evaluate the situation from inside your vehicle. Don't immediately get out because it is possible other vehicles might also be crashing near you. Don't stand between moving traffic and your vehicle. Use a flare, hazard lights or other signaling device to warn other drivers of the crash
- Four-wheel drive vehicles and all-wheel drive vehicles are great at accelerating, but in snow or ice that doesn't help you stop or turn.
